INTERPRO
SOLUTIONS

The EZMaxMobile Difference
—

InterPro is the only company offering a suite of Maximo mobile apps built exclusively for IBM Maximo® — using native Maximo rules, permissions and datastores — eliminating double updates, data lags and synchronization failures. EZMaxMobile expands upon native Maximo capabilities to mirror the way people actually work -- with intuitive interfaces, bold graphics, and rich functionality.

EZMaxMobile is the mobile Maximo solution people switch to when they're frustrated with synchronization failures, slow data transfers, lack of flexibility, conflicting business rules and permissions, or the need to update their app whenever they make a change to Maximo.

It's the solution that's never had a failed implementation.

EZMAXMOBILE

## All the functionality you need in a single app.

EZMaxMobile has all the functionality you need, so there's no need for separate apps for different functions or processes, such as inspections, inventory management or preventive maintenance.

With over 25 delivered processes, tailorable to your specific needs, your technicians can do their jobs without having to jump from app to app.

Online or Offline. Any device.

When your technicians are working in an environment without a reliable data connection, EZMaxMobile lets them go offline – with a patented, lightning-fast offline mode that's nearly 10 times faster than alternative solutions. EZMaxMobile runs on any Apple, Android, or Windows device, so your techs can use the device best suited to their needs and preferences.

EZMaxMobile clients are enjoying productivity gains of up to 200%, significant increases in asset availability, 10X faster sync speeds, the elimination of mobile sync failures, and the ability to accommodate Maximo upgrades in a single, automated step.
InterPro's support for our rapid mobile expansion has been incredible. With what we have implemented so far, we expect the return on investment to be well beyond our initial estimates.

JESSE MOORE / ABM

KEY FEATURES

All EZMaxMobile features are located within one application so there's no need for multiple apps for different functions or processes. Any Apple, Android, or Windows mobile device can interact with Maximo in both real-time and offline modes.

ADVANCED MAPPING

EZMaxMobile offers a choice of mapping capabilities ranging from basic GPS location mapping to interactive layered ESRI ArcGIS location intelligence. You can associate location data with a work order, asset, or location and automatically store the details in your Maximo system. Your field team can visualize work orders and assets in map views, and get point-to-point directions to guide them to the proper location..

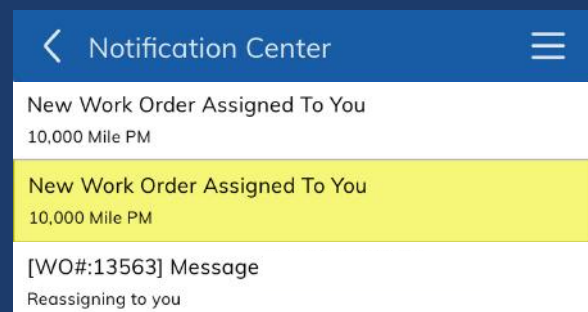

PHOTOS & VIDEOS

Increase your team's efficiency by attaching photos and videos to illustrate work requests and document completed repairs. Photos and videos are automatically uploaded as a Maximo linked document and associated with the underlying work order, asset, location, or inventory item as an attachment. Technicians can also mark-up photos to provide supplemental information and provide greater clarity.

LOCALIZED

Support your global asset management needs. EZMaxMobile is available in all languages supported by Maximo, and is easily tailored to local work practices and references.

PUSH NOTIFICATIONS

Alert technicians to new work orders, changes, and emergency updates.

> Since we began using EZMaxMobile, we've eliminated paper work orders, decreased response time, and increased data quality with real-time work order management.

ONLINE OR OFFLINE

And when your technicians are working in an environment without a reliable data connection, EZMaxMobile lets them go offline — with a patented, lightning-fast offline mode that's nearly 10 times faster than alternative solutions. Unlike other solutions, EZMaxMobile's no-fail synchronization automatically quarantines any data exceptions and lets your team keep working.

BARCODE SCANNING & PRINTING

Gain quick access to records in Maximo for barcoded items such as assets, locations, and inventory item using your mobile-device camera or Bluetooth enabled barcode scanner. Use EZMaxMobile to generate barcodes via portable or fixed printers.

VOICE TO TEXT

Are your technicians struggling with your device's tiny digital keypad? Easily capture notes and give instructions with voice-to-text functionality. Simply speak into your mobile device.

SIGNATURE

Need a signature on work order, purchase requisition, tool check-out or inventory request? EZMaxMobile has it. Captured signatures can then be stored and displayed in Maximo.

DATA WHERE YOU NEED IT

While other OSLC-based solutions bog down when you try to take more than 100,000 records offline, EZMaxMobile's patented sync technology lets you go offline with millions of records.

GUIDED ACTIONS

Define step-by-step actions to guide technicians through a particular process such as an inspection or repair, and prompt next actions based upon prior responses, boosting productivity and improving first fix rates.

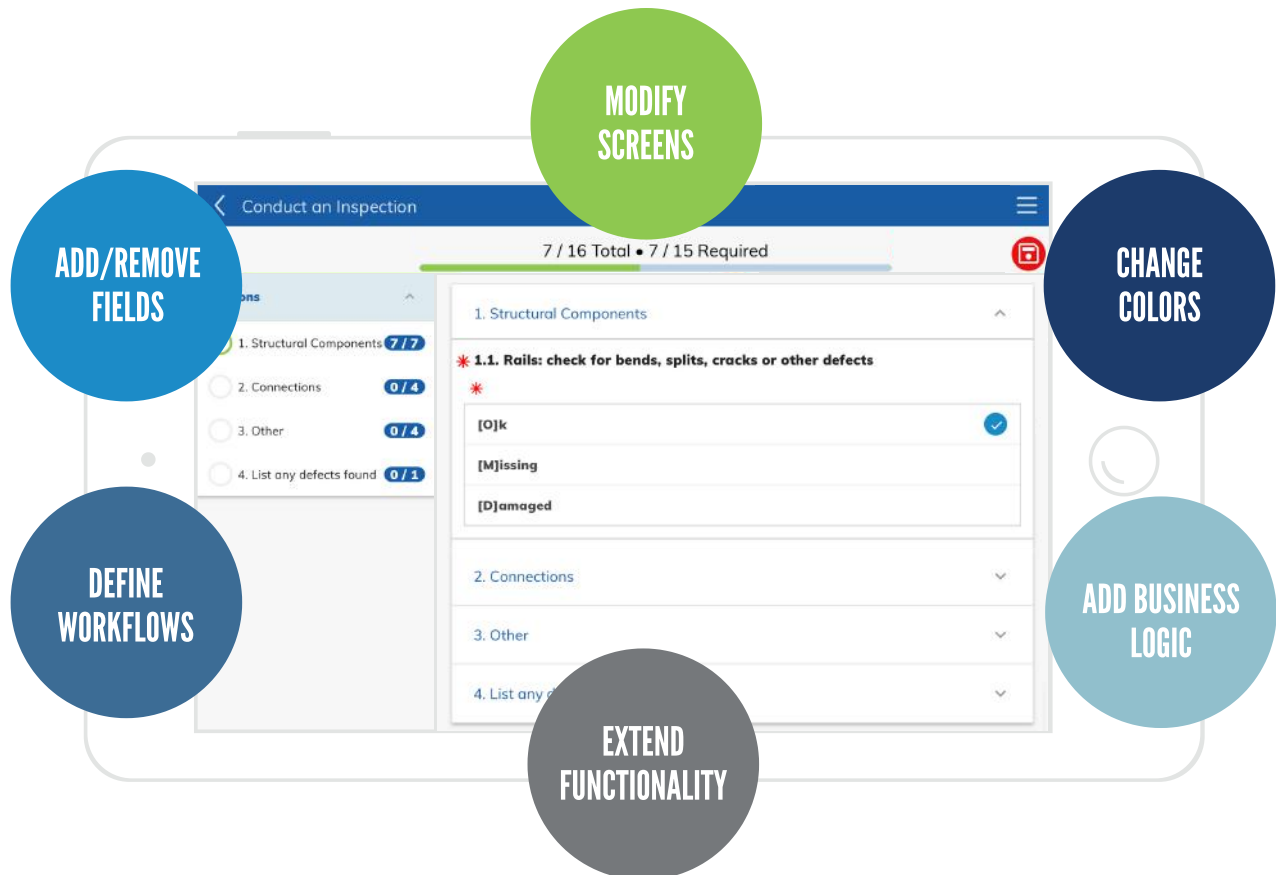

MAXIMO WORKFLOW SUPPORT

Unlike other available solutions, EZMaxMobile lets you bring your configured Maximo workflows to your technicians in the field.

DIGITAL WORK AIDS

Provide equipment schematics, blueprints, instructions, how-to videos and other work aids to arm your technicians with everything they need to diagnose and resolve issues in the field.

MAKE IT YOUR OWN

EZMaxMobile is ready to go right out of the box, and is the only fully functional Maximo mobile solution that can be installed on your server in under 30 minutes. It is also highly flexible so you can easily configure the 25+ delivered processes to conform to your specific workflows, business practices and requirements.

REQUEST A DEMO

Let's talk about how EZMaxMobile can transform the way you work. Give us a call at **781.213.1166** or contact us at **sales@interprosoft.com**.

We have not found a more cost-effective, easy to install, easy to use option than EZMaxMobile. The online/offline mode is an added benefit that we will definitely use.
