

# SCANMAX

Simplify the Creation of IBM Maximo Records

Built on  
IBM Cloud

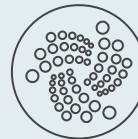

Optimize the invoice  
life cycle in **one**  
integrated system

**Reliability,**  
compatibility and  
data security

Significant gains in  
efficiency.  
Between **25-40%**

**Simple and intuitive.**  
Does not require  
additional training

Winner of the 2019  
**Best New Automation**  
Award

# Integrate **agility** into your business model for **superior** Enterprise Asset Management (EAM)

Combining the power of IBM Maximo with ScanNmax allows you to **automatically convert** paper documents to **digital data**

Developed by TriNmax, ScanNmax is a unique and powerful Optical Character Recognition (OCR) solution that simplifies the creation of records in IBM Maximo.

Fully integrated, the ScanNmax solution receives scanned documents, photographs or can interpret data directly from an emailed PDF and converts the information directly into Maximo's Purchase module.

This application uses a strong character recognition technology and converts your file a priori unusable and which would normally be entered manually into an exploitable file, and this in just a few clicks. In fact, ScanNmax needs but a single screen to view, validate, and adjust the document's data to automatically route to the relevant fields in Maximo.

ScanNmax therefore allows significant gains on the document management process, such as:

- Complete integration with IBM Maximo, no additional infrastructure or customization is needed;
- Increasing operational efficiency by 25-40% and reduces input time and manual errors;
- Standard out-of-the-box models.

A revolutionary, simple and powerful solution for every organization that wishes to manage and store their important paperwork in a much more sustainable way.

Scan, photograph or even upload a PDF document and **ScanNmax electronically converts** your data into IBM Maximo!

TriNmax is an IBM Certified Business Partner, led by industry experts. We offer all professional services related to the **IBM Maximo** solution such as licence purchase, implementation, renewals, updates, IoT integration, support, training and administration.
